

Human IgE (non-immune)**Human monoclonal antibody (non-immune)**

Subclass: IgE/k

PRODUCT NO.	DIA HE1A-01 / DIA HE1A-1
PRESENTATION	Clone: HE1 Production: In vitro hollow fibre production system Preparation: Protein L purified Content: DIA HE1A-01: 150 µL, 1mg/mL DIA HE1A-1: 1 mL, 1mg/mL Solvent: 0.01 M phosphate buffer, pH 7.4, with 0.15 M NaCl and 0.09 % azide Storage: For long term storage, -18 to -22°C is recommended, but it may be stored for short term use at 2 to 8°C. The expiry date on the vial refers to storage at -18 to -22°C. Repeated freeze/thawing is not recommended.
PREPARATION	This product is purified human IgE with kappa light chains produced in vitro from a monoclonal hybridoma. Original material is obtained from a healthy donor tested negative by US-FDA approved tests against HIV, HCV and Hepatitis B, but must be handled as potentially infectious as all human material. The purity of the human IgE is > 90%, tested by SDS-PAGE. As the IgE comes from a monoclonal cell line, there is no contamination of antibodies of other isotypes. The human IgE is purified by Protein L chromatography. The remaining contaminants are mainly components from Foetal Bovine Serum. 1 mg of DIA HE1A is 380,000± 50,000 IU/ml using Siemens total IgE Immulite 2000 kit.
APPLICATION	This antibody is well suited as a standard in IgE quantifying assays due to its very low batch-to-batch variation. Other applications include immunochemistry and cellular immunology research.
